Milking Gloves
Increase Milking Hygiene and Protect Your Hands

When milkers' hands come into contact with infected udders, mastitis-causing bacteria may be transmitted to other cows. The risk is even higher when milkers' hands have cracks where bacteria can easily hide.

INON® Milking Gloves have a dual purpose. First, the smooth surface of the gloves prevents bacteria from attaching to the glove, sharply reducing the chance of infection. Second, the gloves protect your hands so that the skin stays smooth and healthy.

INON® Milking Gloves:
- ✓ Are impenetrable to micro-organisms.
- ✓ Are free from powder and other residues.
- ✓ Are FDA approved as medical gloves.
- ✓ Are made from 100% nitrile and contain no natural rubber proteins that may cause allergies.
- ✓ Are strong yet soft, and comfortable to wear for longer periods of time.
- ✓ Reduce the transmission of bacteria from milker to cow and from cow to cow
- ✓ Protect your hands from a wide range of harsh chemicals.
- ✓ Are available in sizes S through XXL, in two varieties, a regular glove with 4 mil thickness and 9.5 inches long (box of 100 gloves), and a reinforced glove, 8 mil thick and 12 inches in length (box of 50 gloves).
